Upload

Supports maximum wholesale speeds of

25-100Mbps*

Get ready - nbn full fibre is coming

Near gigabit speeds* are coming to Tamborine through a full fibre connection via Fibre to the Premises (FTTP).

We're aiming for this to be available from September 2026, please be aware these dates may change^Δ.

These are wholesale speeds. Speak to your provider about the speeds you could actually experience, including during the busy periods*.

Other plans available >

Designed to support[^]

-  4K resolution streaming on 1-4 devices at the same time
-  Consistent online and cloud gameplay even when others are online
-  Consistent video calls even if others in your household are online
-  Download a 10GB file in approx. 15-65 mins (depending on your FTTN connection)
-  Upload a 1GB file in approx. 9-34 mins (depending on your FTTN connection)

Speak to your provider

Get on with doing great things online

A good internet setup makes for a great nbn experience. Learn how you can optimise your internet setup to get the best from your nbn connection.

This date and technology is based on nbn's current deployment plans and is subject to change. Network rollout information is accurate as at 27/8/2025 and is updated weekly. Rollout areas and boundaries are subject to change as construction planning is finalised.

*

Wholesale speeds quoted are not end user speeds. They represent the maximum speeds nbn provides to internet providers.

Wholesale speed ranges: Where a wholesale speed tier is expressed as a range, these figures show the upper end of that range, which is the maximum theoretical wholesale speed for that speed tier on that access technology. FTTN technology is subject to greater variance in speeds. The actual speeds you receive will depend on factors including how your provider shapes their network, your internet equipment and the number of people online at the same time. **Speeds close to 1Gbps:** Regardless of the retail service you purchase, the actual wholesale download speeds delivered to providers will be less than 1Gbps due to equipment and network limitations.

^

Your experience, including the speeds actually achieved, depends on the configuration over which services are delivered to your premises, whether you are using the internet during the busy periods, and some factors outside of nbn's control (like your equipment quality and set-up, chosen broadband plan, age of device(s) and/or how your provider designs its network). Activities and timeframes described based are on testing conducted in nbn product labs of nbn wholesale HFC and FTTP products, at the retail level based on the peak achievable speed of that speed tier. An end user's experience will be impacted by various factors like those described above.
