[¶] Fair Use Policy and shaping apply. To proactively protect and ensure the fair access to the nbn network for all users, nbn may from time to time, at its discretion, shape the following activities to maximum wholesale upload and download speeds of 256kbps; uploads and downloads via peer to peer; uploads and downloads to cloud storage platforms; PC and smartphone operating system updates; software/application updates; gaming software updates; any other traffic related to applications which nbn cannot identify. Other activity that nbn considers may cause adverse network impacts may also be added to the above list to be shaped, including streaming video and VPN.

- [^] Your experience, including speeds, depends on whether you are using the internet during the busy period, concurrent usage, specific locations from time to time and, some factors outside of nbn's control (like your equipment, software or signal reception). You may also experience latency.
- [†] Enterprise Ethernet eligibility is based on an nbn desktop analysis of available data. There may be a small number of premises where eligibility results will differ from those provided on the nbn website. You will need to confirm your location's eligibility with your provider. If your provider has not selected Class of Service - High, the speeds you experience may be affected by contention on the nbn network, particularly in busy periods.
