Flood Hazard Area for Building Regulation Purposes

This map contains the Flood Hazard Area for Building Regulation Purposes and differs from the Sunshine Coast Council 2014, Flood Hazard Overlay. This map and associated table should be used by industry professionals required to comply with *Queensland Development Code: MP3.5 Construction of Buildings in Flood Hazard Areas*.

The Map is based on the Defined Flood Event, but also includes additional buffer flood hazard areas. These additional buffer areas incorporate freeboard allowance, overland flow paths and street drainage.

If building works are proposed within the Flood Hazard Area for Building Regulation Purposes (including the additional buffer area), then the declared flood level, velocity and finished floor level is required to comply with MP3.5. See table below for this information.

The minimum floor level considers multiple mechanisms, including flooding, overland flow, street drainage and storm tide. It is possible that one mechanism, such as street drainage, generates the Defined Flood Level, while another mechanism, such as flooding generates the minimum floor level, due to the greater freeboard associated for flooding.

For complex situations where the flood search is unable to be automated, application for a customised [Flood Information Search \(self-assessable\)](#) will need to be requested from council.

For more information please refer to Council's Website: [Flood information relevant to building works \(sunshinecoast.qld.gov.au\)](#)

Flood Hazard Area for Building Regulation Purposes - Minimum Floor Level

For the purposes of the QDC MP3.5 (2012) and the Building Regulations s8 (2021), the levels provided in this table for new buildings are a declaration of the finished floor level requirements for Class 1 Buildings built in all or part of the Flood Hazard Area

Defined Flood Level	4.26 mAHD
Maximum Flow Velocity	Not Provided on RPEQ Developer Lot Table
Inactive Flow or Backwater Area	No
Freeboard	300 mm
Minimum Floor Level	4.56 mAHD
Notes	Design verge profile to be maintained for lower lots to achieve flood immunity.
Source	This lot is not mapped within the Flood Hazard Area, however Defined Flood Levels and Minimum Floor Levels have been provided through a RPEQ Certified Developer Lot Table.

Flood Mapping and Information 2023

The map considers flood events of lesser and greater magnitude than the defined flood event and flood behaviour information such as depth, velocity and hazard.

The flood risk mapping has been prepared in a manner consistent with State Planning Policy (July 2017) and Integrating state interests in a planning scheme – Guidance for local governments (May 2021).

Risk rating definitions

High risk - these areas present a high and unacceptable flood risk to life and property.

Moderate risk - flood risk does not meet contemporary standards. However, it is expected that the urban renewal of coastal lots, over time, will deliver an acceptable risk outcome.

Low risk - flood risk is low and meets contemporary community standards. If it becomes possible to reduce this risk at either an individual or community level, it is recommended that the opportunity to do so is given consideration.

Recent development area - flood risk is not mapped as the area has recently been developed. This is likely to have changed the flood risk. Site specific flood studies for the development may be available on Development.i.

Other areas of the floodplain - these areas present a very low risk to life and property.
